

Hello John,

I have a problem that I do not know how to solve :

I inserted a buy order with a limit (in the buy market option it is also so)....

1) The order is executed and after a few seconds, the horizontal line of the transaction place disappears.

Only the lines marked by SL and TP remain.

2) when the aforementioned line disappears, the SL and TP lines if profitable should be green, while with me they are red all the time (regardless of whether the position is profitable or not)

3) the Chart Trade Window does not show how much profit/loss there is on a given position.

When the trade is completed (e.g. by hitting SL), the profitable value is correctly presented in the above window.

I have Sierra hooked up to Interactivebrokers and there the orders entered on SC are normally active.

please help me to solve this problem as soon as possible

Thank you and best regards

Michal
