

Shortcut Menus

Shortcut menus can be displayed by right clicking within Sierra Chart. There are various places where this is possible. They are as follows: The main Sierra Chart window in the area where no charts are displayed. Spreadsheets windows. Charts windows. Chart Drawings on charts. The chart Values Scale on the right side of the chart. Control Bars. Edit boxes in Settings Windows. Shortcut menus contain commands which are found on the main Sierra Chart window menu which are specific to the object you have right clicked on. They may also contain commands which are not found on the main Sierra Chart window menu.

Some of the shortcut menus are customizable. This is done through the **Global Settings** menu. For more information, refer to [Global Settings Menu](#).
