Introduction

Sierra Chart supports the Global Data Feeds data feed from India.

The DTC Protocol is used as the communication protocol between Sierra Chart and the Global Data Feeds server.

This page contains instructions prepared by Global Data Feeds.

What is Included

- Streaming Real-Time Data: **Yes.**
- Historical Intraday Data: **Yes.**
- Historical Daily Data: **Yes.**
- Historical BidVolume and AskVolume: **No.** It is not possible to determine the Bid Volume and Ask Volume from the historical data. Therefore, for the times you are not connected to the data feed, you will have zero values for Bid Volume and Ask Volume. For data collected in real-time by Sierra Chart, there will be Bid Volume and Ask Volume.
- Live Trading Services: **No.**
- Simulated Trading: **Yes by using Sierra Chart Trade Simulation Mode**
- Order Types Supported: **All in Trade Simulation Mode.**
- Automated Trading (applies to Live or Simulated): **Yes.**

Setup Instructions

In Sierra Chart to use Global Data feeds, select **Global Settings >> Data/Trade Service Settings**. Set the **Service** to **Global Data Feeds India - DTC**. Press OK.

How to take free trial:

1. User needs to [download](#) latest version of Sierra Chart platform which supports the Global Data Feeds datafeed.
