-

Introduction

Sierra Chart can be run on GNU/Linux, BSD, and Mac OS X using Wine.

To use Sierra Chart on Mac computers, refer to [Using Sierra Chart on the Mac Operating Systems](#).

Sierra Chart support and engineering does not provide any help with or answer any questions related to running Sierra Chart on other operating systems using Wine.

Instructions

1. Since Sierra Chart is designed for Microsoft Windows, in order to run it on other operating systems you will require [Wine](#). Use your operating system's package manager to install Wine or go to the Wine website to download and install Wine.
 2. Optionally install [Winetricks](#).
 3. Install the **corefonts** packages. These can be easily installed by using Winetricks.
 4. Download and install Sierra Chart on your alternative operating system. To download Sierra Chart, go to the [Software Download](#) page.
