

# Drawing Parallel Lines

## Drawing Parallel Lines

---

There are several methods to draw parallel lines.

1. Draw 2 lines and then use one of the [Make Line Parallel commands](#) on the chart drawing shortcut menu (this is the menu you get when you right-click on a chart drawing), to make the two lines parallel to each other.
2. Draw a line and then use the command [Copy and Move Drawing](#) on the **Tools** menu or the chart drawing shortcut menu, to make a copy of the line which will be parallel to the original line.
3. Use either the [Parallel Lines](#) or [Parallel Rays](#) drawing tools.
