Sharing Your Spreadsheet Study With Another User

To share your Spreadsheet studies, follow the steps below:

1. When you have your Spreadsheet Study ready, save it as a Study Collection. Go to the chart that contains the Spreadsheet study and select **Analysis >> Studies**.
 2. In the **Save Studies as Study Collection >> Name** box, type a name for the Study Collection.
 3. Press the **Save All** button. For complete details, refer to the [Study Collections](#) page.
 4. You can also share the Spreadsheet Study as a [Chartbook](#). So in this case select **File >> Save** to save your Chartbook when it is currently open.
 5. You will then need to provide the Study Collection file or Chartbook file, and the Spreadsheet file to the other user. You can also send them to yourself to cause them to be installed to other instances of Sierra Chart. To do this, use the [File Sharing](#) feature. Make sure to send both the saved Study Collection file and the Spreadsheet file. You can also send the Chartbook file as well.
 6. You may also want to provide a link to the [Applying a Study Collection to a Chart](#) documentation page for the steps to save and use your Spreadsheet Study assuming you provided the Study Collection to them.
