

## Loading More Or Less Data into an Intraday Chart

Select **Chart >> Chart Settings** on the menu. To load less data into an Intraday chart, decrease the **Use Number of Days to Load >> Days to Load** setting. For further information, refer to [Days to Load](#).

If you want to just have one day in the Intraday chart, then set **Days to Load** to 1. If you keep a chart continuously open, then you will need to select **Chart>> Reload and Recalculate** on the menu each day to limit the data to one day in the chart.

To increase the amount of data in an Intraday chart, refer to [Downloading/Viewing More Historical Intraday Data](#).
