

versal, Renko, or Delta Volume Bars, you will want to use TICK data for price.

The image shows a 'Data/Trade Service Settings' dialog box with a green title bar and a close button (X) in the top right corner. The dialog is divided into several sections. At the top left, there is a 'Service:' dropdown menu currently set to 'IQFeed [data]'. Below this is a large empty rectangular area. To the right of this area, there are several settings: a checked checkbox for 'Connect on Program Startup', a checked checkbox for 'Reconnect on Failure', an 'HTTP SSL Proxy Port:' text box with the value '443', a 'Time Zone:' dropdown menu set to 'New York (5 EST/ 4 EDT)', an 'Intraday Data Storage Time Unit:' dropdown menu set to '1 Tick', a 'Number Of Stored Time And Sales Records:' spin box with the value '4000', and a 'Max Historical Intraday Days To Download' section containing 'Non-Tick Data:' (1100) and '1 Tick Data:' (30) spin boxes. Below these are several unchecked checkboxes: 'Enable FIX Logging', 'Log Market Data', 'Allow Support for Sierra Chart Data Feeds', 'Support Alternate Forex Historical Data', 'Download Dividend Adjusted Historical Data', and 'Show Passwords'. At the bottom left, there is a 'Saved DTS Configuration' section with a 'DTS Config:' dropdown menu and 'Load', 'Save', and 'Delete' buttons. At the bottom right, there are buttons for 'Large Data File Settings', 'Advanced', and 'SC Server Settings'. The very bottom of the dialog has 'OK', 'Cancel', and 'Help' buttons.
